**TO WHOM IT MAY CONCERN****Reference for Natta Building working at the Park Inn Hotel.**

Natta Building undertook the Groundworks, foundations and Drainage packages for Skanska at the Park Inn Hotel where I was the Project Manager.

Due to substantially more asbestos being encountered in the demolition phase of the project, the demolition activities over ran by 2 weeks on an already tight programme. By working 7 days a week with extended hours Natta managed to condense their 7-week foundation works programme down to 5 weeks bringing the project back on schedule for steel frame erection.

Following the steel frame erection Natta's second phase was to install the under-slab drainage, ground beams, ground floor and mezzanine level slabs. These works were again completed within the required time frame with Natta demonstrating extensive knowledge of different construction methods, and always handing over completed works to the high quality expected by Skanska.

I found Natta and their project manager Mr. John Dunwoody a pleasure to deal with and would have no problem in recommending them for future contracts.
